SUMMARY

Frontend/UI Engineer with 4+ years building production web applications in React, TypeScript, and Vue, from GenAI products to data-heavy geospatial tools. First frontend engineer on two GenAI products at eGain, taking both from Figma prototype to production. Focused on component architecture, accessibility, and performance, and on making complex model output legible and actionable in the interface.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2022+), HTML5, CSS3, SQL
Frameworks & Libraries: React, Next.js, Redux, Vue.js, Node.js, Tailwind CSS, Material-UI
Frontend Engineering: Component architecture, design systems, state management, SSR, REST and GraphQL API integration, responsive design, accessibility (WCAG 2.1), Core Web Vitals and performance optimization
AI Product Development: LLM-backed product interfaces, retrieval and knowledge-gap workflows
Design & Tools: Figma, prototyping, Storybook, Git/GitHub, Jest, Playwright, Jira

EXPERIENCE

UI Engineer II (Promoted) | Dec 2025 - Present
UI Engineer I | Oct 2024 - Nov 2025
eGain Corporation | Sunnyvale, CA

- First frontend engineer on the product, building the React + TypeScript frontend for a GenAI system that analyzes an entire knowledge base to flag duplicate and conflicting articles and run per-article quality checks, keeping content accurate and consistent so the AI and agents relying on it give trustworthy answers.
- Translated probabilistic model output (embedding similarity, natural-language inference, LLM verification) into conflict evidence and confidence signals content managers could act on directly.
- Sole frontend engineer on the initial build of eGain's GenAI product that mines customer support transcripts and failed searches to surface the questions customers actually ask, ranks them by business value, and detects knowledge gaps, then generates AI instant-answers and draft articles to close them.
- Delivered the full interface solo in React + TypeScript, from Figma prototype to production, covering question-ranking, gap-detection, and AI article-review workflows. After it was showcased in the VP's annual presentation, the company staffed a dedicated team on the product; now adopted by three enterprise clients.
- Developed an AI agent interface in React integrated with Jira and BambooHR, automating routine HR and support workflows.

Frontend Developer | Oct 2022 - Jan 2024
GHD Group | Waterloo, ON, Canada

- Rebuilt the civil/environmental web platform in Vue.js as a workspace-style UI, adding a new toolbar and data-layer management for interactive maps.
- Proposed and implemented reusable Vue component patterns and accessibility improvements that made data-heavy geospatial tools usable for non-specialist teams.
- Optimized rendering performance, cutting load times by 30% and improving responsiveness on large map datasets.

Frontend Developer Intern | Jun 2022 - Aug 2022
Reviewerly, Toronto Metropolitan University | Toronto, ON, Canada

- Built reusable components in React, Redux, and Material-UI that improved design consistency and accessibility; refined UX flows through Figma prototypes and covered component behavior with Jest.

EDUCATION

Postgraduate Program, Web Development | Humber College, Toronto, Canada | Sep 2021 - Sep 2022
B.Sc., Mechanical Engineering | Sharif University of Technology, Tehran, Iran | Sep 2012 - Sep 2017
